X

Die Schrauben sind abwechselnd, kreuzweise mit dem Anzugsdrehmoment gemäß Tabelle festzuschrauben und gegen unbeabsichtigtes Lösen zu sichern.

Tighten the screws alternately (crosswise) with the tightening torque according to the table below, and secure them against unintentional loosening.

Serrer les vis conformément au tableau, l'une après l'autre, de manière croisée, avec un couple constant et s'assurer qu'elles ne puissent pas être desserrées malencontreusement.

Le viti devono venire serrate alternativamente in modo incrociato con un momento torcente definito secondo tabella, assicurandosi che non possano svitarsi inavvertitamente.

Los tornillos deben ser fijados alternativamente en cruz con un par de apriete según tabla y asegurados frente a destornillamiento involuntario.

A	M5 = $M_d \leq 6 \text{ Nm}$ M6 = $M_d \leq 10.5 \text{ Nm}$
K	M3 = $M_d \leq 1.4 \text{ Nm}$
B,C,L	M5 = $M_d \leq 6 \text{ Nm}$
D	M5 = $M_d \leq 3 \text{ Nm}$
E,M,F	M6 = $M_d \leq 10.5 \text{ Nm}$

Alternativ kann die Teilungstrommel auf eine Welle geschumpft werden. **Keine Induktionsheizquelle verwenden!** Dazu die Teilungstrommel vor der Montage langsam über einen Zeitraum von 10 min auf eine Temperatur von max. 100°C (PC CF max. 50°C) erwärmen. Maximale Temperaturdifferenz Heizplatte zur ERM-Teilungstrommel 20 K.

*As an alternative, the scale drum can be shrunk onto a shaft. **Do not use an inductive heat source!** Before mounting, slowly warm the scale drum over a period of 10 minutes to a temperature of max. 100 °C (PC CF: max. 50 °C). Max. temperature difference between heating plate and ERM scale drum: 20 K*

En alternative, le tambour gradué peut être rétréci sur un arbre. **Ne pas utiliser de source de chaleur par induction!** Pour cela, avant le montage, réchauffer lentement le tambour gradué pendant une durée de 10 min. à une température de 100 °C max. (PC CF 50 °C max.). Différence de température max. entre la plaque chauffante et le tambour gradué de l'ERM: 20 K.

*In alternativa il tamburo graduato può essere montato a caldo su un albero. **Non utilizzare una fonte di calore a induzione!** Prima del montaggio riscaldare lentamente il tamburo, portandolo a 100 °C (PC CF 50 °C) in 10 minuti. Max differenza di temperatura tra piastra di riscaldamento e tamburo dell'ERM: 20 K.*

Como alternativa, el tambor graduado puede ser ajustado al eje por contracción. **¡No utilizar ninguna fuente de calor inductiva!** Antes del montaje, calentar lentamente el tambor graduado durante 10 minutos a una temperatura máxima de 100 °C (PC CF máx. 50 °C). Máxima diferencia de temperatura entre la placa de calentamiento y el tambor graduado del ERM: 20 K.
